EXPERIENCE

Undergraduate Research Assistant, Health Imaging Lab

Jan 2026 - Present

- Built a PyTorch pipeline that preprocesses 12,000 chest X-ray images and trains a ResNet-18 baseline
- Implemented Grad-CAM and integrated-gradients saliency maps to compare model explanations on chest X-rays
- Annotated 4,000 medical images with bounding boxes following a clinician-written guideline
- Presented weekly progress updates to the PI and two graduate mentors

Software Engineering Intern, Prairie Analytics

May 2025 - Aug 2025

- Reduced nightly ETL runtime from 40 minutes to 9 minutes by rewriting SQL joins and adding indexes
- Wrote unit and integration tests with pytest for 14 data-validation functions and raised coverage to 92%
- Configured GitHub Actions CI to run linting, type checks and tests on every pull request

Teaching Assistant, CS 225 Data Structures

Aug 2024 - May 2025

- Mentored three first-year students in data structures and algorithms during weekly office hours
- Graded weekly programming assignments for 180 students and wrote autograder test cases in C++
- Led two review sessions before each midterm exam with about 60 students attending

SKILLS

Python, PyTorch, SQL, C++, Git, Linux, pandas, scikit-learn

Designed and implemented a REST API in Flask serving 3 internal dashboards used by 40 analysts every week

Reduced nightly ETL runtime from 40 minutes to 9 minutes by rewriting SQL joins and adding partitioned indexes

Implemented Grad-CAM and integrated-gradients saliency maps to compare model explanations on chest X-rays

Mentored three first-year students in data structures and algorithms during weekly office hours

Fine-tuned a multilingual BERT model on 3,000 labeled tweets and reached 78% accuracy versus a 71% baseline

Maintained the lab website and documentation using Jekyll and GitHub Pages

Benchmarked three object-detection models on a custom drone dataset and reported mAP and latency tradeoffs

Coordinated volunteer shifts for a food bank serving 300 families each month

Optimized a CUDA kernel for sparse matrix multiplication and achieved a 3x speedup over the baseline

Interviewed 25 users and synthesized findings into a product requirements document
